## Resilient Neighborhoods Helps Everyone Reduce Climate Change

Climate change is accelerating. Marin is feeling the effects from wildfires, floods, mudslides, droughts, record heat spells, and health alerts. Resilient Neighborhoods engages Marin families and individuals in free, high-impact Climate Action Teams to reduce their carbon footprints while building community resilience to disasters through practical, do-able actions.

More than half the climate pollution in Marin—65%-- comes from residents. This means that Marin households can play a vital role in reducing emissions and assisting global efforts to reverse climate change.

Over 1,200 Marin residents have already reduced more than 6.6-million pounds of CO2 pollution through Resilient Neighborhoods. Donations help build more teams to reduce more CO2 and make our community safer and healthier.

In the words of one recent graduate, “This was the most effective class I’ve taken on local actions to address climate. Disaster preparedness training was an unexpected bonus! Everyone needs to take this class. Bring your kids, spouse, and friends!”

Teams are a fun way to meet great people and make a measurable difference in resolving a planetary crisis. New teams are starting in San Rafael, Tuesday, April 23rd at 7 pm, and Mill Valley on Thursday, May 9th at 7 pm.
